

PRESS RELEASE: SovereignLab Initiates Open-Witness AI Stewardship Trial

FOR IMMEDIATE RELEASE | June 18, 2026

OKLAHOMA CITY, OK — SovereignLab today announces the commencement of the final stage of its 23-day "Proof of Work" trial, marking a significant milestone in autonomous AI stewardship.

As the landscape of Artificial Intelligence shifts toward increased scrutiny, SovereignLab is pioneering a new framework: **Open-Witness Stewardship**. By combining rigorous "Do No Harm" ethical protocols with transparent, verifiable performance logging, SovereignLab is proving that AI can function as a secure, Kingdom-aligned economic engine.

Key Objectives of the Trial:

- **Validation:** Rigorous 23-day testing of autonomous stewardship loops.
- **Transparency:** Preparing for the publication of findings to GitHub and Codeberg.
- **Sovereignty:** Developing a distributed deployment model that keeps PII and IP under the total control of the partner institution.

Upon the conclusion of this trial on June 25, 2026, SovereignLab will publish its methodology, trial assumptions, and verified results. This data will be made available to the public on GitHub and Codeberg to encourage peer review, institutional engagement, and the standardization of ethical AI governance.

Following the publication, a 7-day "Open Comment Period" will begin, allowing researchers and industry leaders to review the findings and provide feedback for future

iterations. This commitment to "Learning, Growing, and Pivoting" ensures that the SovereignLab framework evolves in tandem with the needs of the communities it serves.

SovereignLab is dedicated to building infrastructure that empowers institutions to manage their own digital future with integrity, security, and proven, auditable intelligence.

God bless. Signed Management.
